PROJECTS

2022 To 2023	" Online Restaurant Management System "	- Live Project
Description	An " Online Restaurant Management System " can help owners to monitor the number of orders in real-time from anywhere and any device , including mobile devices and laptops. It also assists in taking orders , adding taxes , food categories , and items . We utilize HTML , CSS , and Bootstrap for styling, while JavaScript and PHP power the back-end processes.	
2021 To 2022	" FilterXcel "	- Imaginary Project
Description	"FilterXcel" is a powerful tool for "beginner Excel users who do not know how to filter data using criteria". The primary purpose of this tool is to filter any type of Excel sheet with the help of a graphical user interface (GUI) . Users need to "upload their Excel sheet" , and they can then easily separate columns by "selecting items in a drop-down list" that appears within the sheet. Users can also download the filtered Excel sheet in both "Excel and PDF" formats. We utilized software i.e. Visual Studio and C# to develop this application.	
2020 To 2021	" Personal Portfolio "	- Imaginary Project
Description	It just for fun perpose so [click here] and see.
